

28 July 2022

JUNE 2022 QUARTERLY ACTIVITIES REPORT

HIGHLIGHTS

- Xanadu gold project earthworks in progress for upcoming RC drilling
- Challa drilling program statutory and cultural heritage approvals completed
- Challa aircore drilling program undertaken subsequent to end of the quarter
- Platina Scandium Project master alloy development and permitting programs progressed
- New tenement application covering previous Mt Narryer project

Xanadu Gold Project, Western Australia

The 100% owned Xanadu Gold Project is located in the Ashburton Basin in Western Australia in close proximity to the Mt Olympus gold deposit which contains a 1.65MoZs gold resource.

During the quarter, all statutory approvals for drilling were received. A cultural heritage survey of the planned reverse circulation drill pad sites is scheduled to be completed imminently to enable drilling to commence in late August.

A 4,000m Phase 1 reverse circulation drilling program is planned to follow up results from the 2021 geophysics program which identified multiple anomalies for drill testing. The survey comprised a gradient array IP at a line spacing of 100m over the entire survey area with dipole-dipole IP lines east of the historic Amphitheatre open pit and follow up of the Big Bend Anomaly. The IP data has identified a linear zone, defined by the margin of conductive and resistive features, which maps out a 6km strike length target zone – see Figure 1. – and outlines 16 potential drill hole locations.

Along this target area, several chargeable anomalies, potentially representing sulphides with associated gold mineralisation, have been identified. Follow up dipole – dipole IP surveying has provided more detailed confirmation of the chargeable targets along this linear zone. Reprocessing of airborne electromagnetics (AEM) data over the broader project area has also been completed.

The program has contributed to the understanding of the structures and host rocks and enabled the company to confidently identify drill targets with potential for gold – sulphide mineralisation at depth.

The program covered a 7km target section of the Xanadu gold trend distinguished by historic gold occurrences drilled within the Duck Creek Dolomite along the Nanjilgardy fault zone and its splays which traverses the project area.

Platina's strong geological data set combined with the new geophysical data served to advance the understanding along the regional 25km strike of the prospective Xanadu trend, much of which is obscured by cover and has seen little or no past exploration.

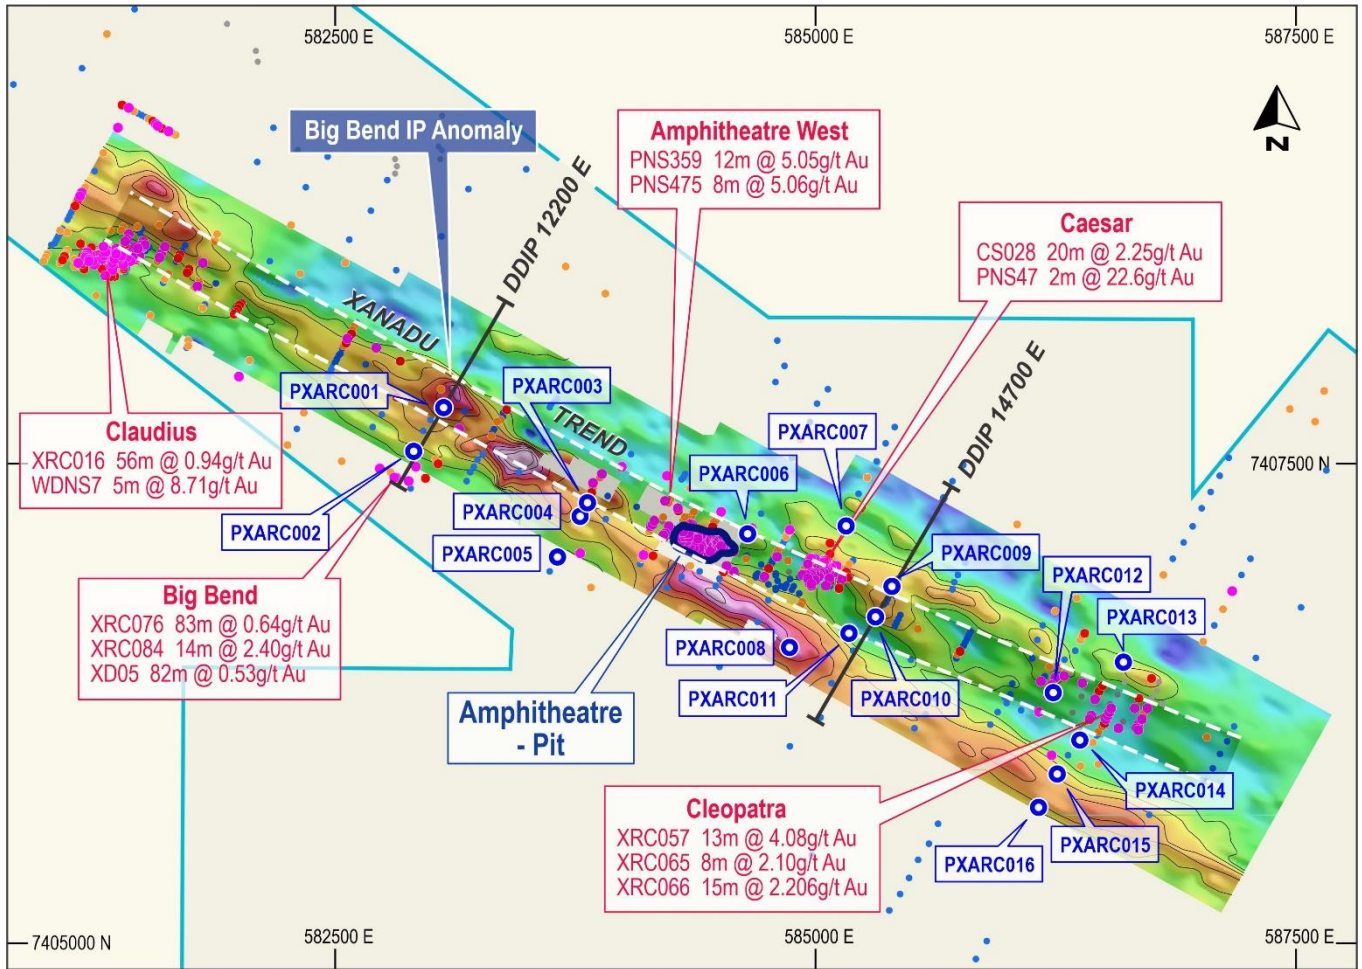

Figure 1: Xanadu Project drilling locations

Challa Gold Project, Western Australia

The Challa Gold Project is located in-between the prolific Mt Magnet and Sandstone gold districts in Western Australia, 500km north-east of Perth.

During the quarter, all statutory approvals and a cultural heritage survey were completed. Following a wet weather delay, a maiden 2,398m aircore ("AC") drilling program was completed subsequent to the end of the quarter. The Phase 1 aircore drilling program was planned to test some of the targets identified through the extensive soil testing program which coincide with interpreted structures developed from the regional aeromagnetic data. The technique has been successfully applied to other under cover gold discoveries in the Yilgarn, for example at Bronzewing and Jundee. Assay results for the completed AC drilling program are expected in September 2022. Further drilling to test other soil anomalies is planned.

Platina Scandium Project, New South Wales

The Platina Scandium Project (PSP) located in central New South Wales is one of the largest and highest-grade scandium deposits in the world. It has the potential to become Australia's first scandium producer with cobalt and nickel credits. A Definitive Feasibility Study (DFS) was completed in December 2018.

During the quarter, Platina initiatives to unlock the value in the PSP included progressing the master alloy development program at Swinburne University and progressing key aspects of the permitting activities required to secure a Mining Licence.

In recent times there has been a significant amount of interest in the development of scandium projects to reduce the western world reliance on China for their supply. A number of major global mining industry players have responded and are developing new scandium production facilities. Given the world-class nature of the Platina Scandium Project scandium project in New South Wales, Platina has received corporate interest in the project and will continue to focus on how it can maximise value for shareholders from the project.

Master Alloy Development Program

Last quarter, Platina completed the first phase in some new trials to produce a new high-grade, aluminium-scandium master alloy that it believes will be attractive to end users. The tests have demonstrated the successful conversion of scandium oxide into scandium aluminide producing micro-structures that are the same as commercially available aluminium scandium master alloys. The high-grade master alloy has also successfully been diluted back down to a standard commercial grade of 2% scandium alloy.

Ongoing test work during the June quarter continued on the development of an aluminium scandium master alloy production process. Latest tests characterised the effects of key variables on the product quality and recoveries. These results will enable optimisation of the process conditions. Scandia conversion of up to 100% has been achieved. The scale of experiments has also been increased ten times. The scaling up increased process consistency and confidence for a commercial process. The switch over to a new locally sourced aluminium powder was successfully applied.

During the first quarter FY2023, a new phase of test work will commence using an intermediate product, scandium hydroxide, that could be potentially produced from the Platina Scandium Hydroxide. If successful, this could potentially reduce the overall cost of producing a master alloy.

The key to unlocking the scandium market is having the ability to supply customers with master alloy at a small-scale and grow production as demand increases. The new alloys are high-grade with more than twice the amount of available scandium than current commercial products.

There is strong evidence that aluminium scandium alloys appeal as a lightweight, high strength alloy for electric vehicles and other markets. Platina's strategy is to develop a proprietary process for a relatively modest capital and operating cost operation to produce a premium value-added product directly saleable into the market.

PSP Permitting Process

Platina commenced a stakeholder engagement program during the quarter as part of its renewed focus on securing operating permits at both Condobolin and the Red Heart Mine site. This process remains ongoing.

The Condobolin site lease with the Lachlan Shire Council is currently being renewed for a further 12 months with an option for an additional 12 month extension.

Mt Narryer, Western Australia

Exploration Licence (E 09/2423) at Mt Narryer South, 580km north of Perth, is yet to be granted by the Western Australian Department of Mines, Industry Regulation and Safety (“DMIRS”). During the quarter, Platina reduced the size of the tenement application to exclude a small fraction which covered state forest. Platina has now been informed by DMIRS that they are now reviewing their previously accepted practice of granting a tenement for a lesser area than was originally applied for, as well as the practice of priority waivers for certain tenure. As such, the Department is now briefing the Minister and taking advice from the State Solicitors Office regarding these practices. The application grant is again delayed pending the outcome of this review. The DMIRS have not given any indication of how long this review is likely to take.

Platina has applied for a new Exploration Licence (E09/2704), which overlaps and expands the area of the original application to cover the possible rejection of the application.

Corporate Activities

At the end of the quarter (30 June 2022), Platina holds \$1.2 million in cash and investments valued at A\$4.2 million, including:

- Major Precious Metals Corp (CSE: SIZE, 49 million shares, value A\$2.5 million)
- Blue Moon Mining (TSXV: MOON, 6 million shares, value A\$0.165 million)
- Nelson Resources (ASX: NES, 6 million shares, value A\$0.078 million)
- Alien Metals (AIM: UFO, 138 million shares, value A\$1.46 million)

Subsequent to the end of quarter, Platina sold 4 million Alien shares.

ASX Additional Information

1. ASX Listing Rule 5.3.1: Exploration and Evaluation Expenditure (excluding staff costs) during the Quarter was \$172,000. Full details of exploration activity during the Quarter are set out in this report.

2. ASX Listing Rule 5.3.2: There were no substantive mining production and development activities during the Quarter.

3. ASX Listing Rule 5.3.5: A total of \$119,450 was paid to related parties during the quarter comprising the Managing Director’s salary and Non-Executive Director fees. During the quarter, HopgoodGanim, a legal firm of which director, Mr Brian Moller is a partner was paid legal fees of \$5,835.

This announcement was authorised by Mr Corey Nolan, Managing Director of Platina Resources Limited.

About Platina Resources

Platina is an Australian-based company focused on returning shareholder value by advancing early-stage metals projects through exploration, feasibility, permitting and into development.

Platina controls a 100% interest in the following projects:

- Xanadu Gold Project – located in the Ashburton Basin in Western Australia in close proximity to the Mt Olympus gold project, a multi-million-ounce gold endowment;
- Challa Gold Project – located between the prolific Mt Magnet and Sandstone gold districts in Western Australia, 500km north-east of Perth;
- Mt Narryer Gold Project (not granted) - located 300km north-west of the company's Challa Gold Project on the fringe of the Yilgarn Craton, a prodigious gold and base metal producing province;
- Platina Scandium Project – located in central New South Wales, the project is one of the largest and highest-grade scandium deposits in the world.

Platina has share investments in the following companies

- Major Precious Metals (49 million shares, NEO.SIZE) – Major is a Canadian mining and exploration company whose flagship Skaergaard Project hosts one of the world's largest undeveloped gold deposits and one of the largest palladium resources outside of South Africa and Russia;
- Alien Metals (138 million shares, AIM.UFO) - Exploration and mining project developer focused on precious and base metal projects including the Hamersley Iron Ore Project, Elizabeth Hill Silver Project and the surrounding Munni Munni exploration permits, all located within the Pilbara region of Western Australia, as well as two silver projects and a copper gold project in Mexico;
- Blue Moon Zinc Corporation (6 million shares, TSXV.MOON) – the Blue Moon Zinc Project has a NI43-101 resource which is open at depth and along strike; and
- Nelson Resources Limited (5.8 million shares, ASX.NES) – West Australian focused gold exploration company.

For more information please see: www.platinareources.com.au

References to previous ASX Releases

The information in this report that relates to Exploration Results were last reported by the company in compliance with the 2012 Edition of the JORC Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves in market releases dated as follows:

- Platina acquires gold project in prolific gold province, 11 June 2020
- Platina expanding presence in WA Goldfields, 23 July 2020
- Platina builds gold presence in Western Australia, 4th April 2021
- Platina moves closer to maiden drilling program at the Challa Gold Project, 31 March 2021
- Assay results at Challa to lead to maiden drilling program, 8 October 2021
- Platina geophysics identifies strong drill targets at Xanadu Gold Project in Western Australia, 22 February 2022

The company confirms that it is not aware of any new information or data that materially affects the information included in the market announcements referred to above and further confirms that all material assumptions underpinning the exploration results contained in those market releases continue to apply and have not materially changed.

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

7. Financing facilities	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
<i>Note: the term "facility" includes all forms of financing arrangements available to the entity. Add notes as necessary for an understanding of the sources of finance available to the entity.</i>		
7.1 Loan facilities	N/A	N/A
7.2 Credit standby arrangements		
7.3 Other (please specify)		
7.4 Total financing facilities		
7.5 Unused financing facilities available at quarter end		
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.	

8. Estimated cash available for future operating activities	\$A'000
8.1 Net cash from / (used in) operating activities (item 1.9)	(535)
8.2 Payments for exploration & evaluation classified as investing activities (item 2.1(d))	-
8.3 Total relevant outgoings (item 8.1 + item 8.2)	(535)
8.4 Cash and cash equivalents at quarter end (item 4.6)	1,222
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	1,222
8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	2.28
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A.	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A.	
8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?	
Answer: N/A.	
<i>Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.</i>	

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed and has been authorised for release by the Board.

Date: 28 July 2022

Authorised by: The Board

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
